

# 24/7 Smart fire door compliance

## Fully compliant, tested and certified remote monitoring.

**Building managers are responsible for implementing inspection and maintenance regimes to ensure all fire doors are fully compliant with legislative requirements. However, detecting events that lead to non-compliant door function which arise between scheduled inspections can be challenging.**

Our innovative Safer Door System simplifies this process by providing 24/7 real-time data on door function, ensuring the safety and interests of residents and assets, while assisting building managers in maintaining compliance with legal requirements.

### KEY FEATURES

- Detects and auto-reports on temporary and persisting open and ajar states.
- Tracks and reports when doors have been opened/closed.
- Provides hourly reports on door usage in buildings and across estates.
- Flags doors that have been opened, which are not expected to be in daily use.
- Reports ambient temperature/humidity and battery health.

### THE SYSTEM

- Is designed for indoor use and the wireless devices are easy to install on new doors and to retrofit to existing doors. No electrical knowledge required.
- Devices are low maintenance and are driven by one AA battery which lasts approx. 24 months.
- Includes a tamper switch to detect malicious activity.
- Is designed to work either as a standalone system or to be integrated into existing facilities management systems and other on-premise and internet-based platforms.
